As the generation of a representation from raw, partially relevant information takes place in the brain, the brain has to deal with a large number of constraints. These constraints are not only internal to the brain, but also external to it. The brain has to deal with a large number of constraints, which are not only internal to the brain, but also external to it. The brain has to deal with a large number of constraints, which are not only internal to the brain, but also external to it.
