19714

Geophysical Examination Report

A. Nature, extent, and cost of the survey.

The nature of this geophysical survey was an examination of claim areas for relative isotopic readings of radioactive AU. The examination is of value not only for qualitative indications, but also for quantitative comparisons of one area of the deposit to another. The instrument is of the Algor scintillometer type and has been used extensively to find and evaluate mineral properties. The cost of the survey is indicated on the affidavit of proof of labor.

B. Location of the work performed.

The locations where the readings were taken are depicted on the attached map. They can be seen in relation to the claims' borders and location monuments. When claims are contiguous, work performed on one or more claims applies to all.

C. The survey examiner.

Jeffrey L. Hall has had extensive field experience with the instrument used and the interpretation of its readings. He has acted as a professional consultant to others using this instrument. Mr. Hall's address is: P.O. Box 17185, Salem, OR 97305.

D. Interpretation of data.

Isotopic readings are stronger the higher the number. They indicate greater strength of mineralization the higher the number. However, P meter readings strengthen from N 100 to N 0 and continue from P 0 to P 100. Thus, P 10 is 50 points stronger than N 40.

19715 MGW #1-3 mining clains claim labels and border one in green. Clains locatio monuments are black dots with red halos. Instrument readings: Prieter Isotopes 12-13 a NZO-40 14-15 N30-40 b 14-15 N20-40 C 13-14 N40-60 d 12-13 N20-40 e 16 N 20-30 f E. Sarvey results. The readings obtained on those claims were relatively uniform. In terms of quality, they seems to be on the medicine and of theigh. They are of sufficient quality to warrant further investigation and evaluation, particips with geochemical means. Alley Hall STATE OF OREGON: COUNTY OF KLAMATH: 28th __ day the .
